

ABSTRACT

A novel combination cup for carrying soft drinks and snacks within one
5 cup structure is comprised of: 1) an upper cup body, 2) a lid cover for the
upper cup body, 3) an insulating plate 4) a ring, and, 5) a lower cup body
jointed together. The upper cup body lid cover may be used as cup holder to
prevent the cup from falling over and spilling its contents. The lower cup
body may be used to contain liquid drinks while the upper cup body may be
10 used to contain solid snacks. The convenient combination of this invention
enables a user to eat and drink using only one hand, and also to enjoy the
cool or hot temperature of the drinks longer and safer.
